EDUCATION

University of British Columbia (UBC) – Vancouver, BC

Bachelor of Applied Science, Computer Engineering (Intended) — Sept 2025 – Present

- Coursework: Computation, Data Science (R), Engineering Analysis, Physics (E&M), Linear Algebra
- Self-Study: C++, AI Workflows, Machine Learning, Web Development

TECHNICAL SKILLS

- Languages: Python, Java, C, SQL, R
- AI/ML Tools: NumPy, Pandas, Matplotlib, R (tidymodels), MATLAB
- Developer Tools: Microsoft 365, Git, GitHub Actions, VS Code, GDB, SolidWorks (CAD)
- Spoken Languages: Turkish (Native), English (Fluent), German (Pre-Intermediate), French (Elementary)

PROJECTS & COMPETITIONS

Autonomous Agent | *Python, Telegram API*

- Designed an automated registration workflow using a Finite State Machine (FSM).
- Integrated user data storage and analytics for streamlined onboarding.

Denigor Ascend (Doodle Jump Clone) | *Java*

- Implemented object-oriented game logic and physics simulation for mobile gameplay.

Mechanical Toothpaste Squeezer | *CAD, Rapid Prototyping*

- Designed a functional mechanical assembly to optimize material usage and ergonomics in 3D

Mechanical Claw | *Arduino, C++*

- Designed and programmed an embedded robotic system using C++ to execute precise gripping sequences.
- Implemented real-time sensor feedback loops to automate object detection and handling.
- Optimized motor control logic for efficiency, accounting for the physical and power constraints of the Arduino platform.

Minecraft Engagement & Newsletter Predictor | *R, tidymodels*

- Built a k-NN model achieving 97.2% recall using 5-fold cross-validation (k = 21).
- Engineered a data pipeline for feature scaling and missing-value handling across 190 + user samples.
- Performed exploratory data analysis (EDA) to identify key predictors of user retention, utilizing recall-optimized models to minimize false negatives.

Canadian Computing Competition (CCC):

- Ranked in Top 25% Nationally for algorithmic problem-solving.
